

# Amera Elsayed Helmi

first , I thank you for giving me this chance and willing to do my best .

I started on 07.00 pm as my internet connection doesn't work all the day .

I see required features need more specified time .

I worked with Zend framework and on Linux platform ubuntu 14.04.

## **these are done features:**

- 1-create database.
- 2- registration form.
- 3-login form.
- 4- authentication .
- 5-add ,delete ,list posts.
- 6- add,delete ,list users.
- 7-add ,delete ,list category.
- 8-profile page.
- 9-log out

## **notice:**

**database name:** Blog

I attached database.sql

to run application , should change db configuration in application.ini file with username and password of mysql.
